How to Register a Service User or their Next of kin to see the visit / care notes

0010

CRT Care services

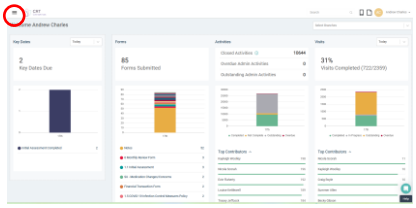

carewatch SHEFFIELD supporting independence

Dale Care Care services

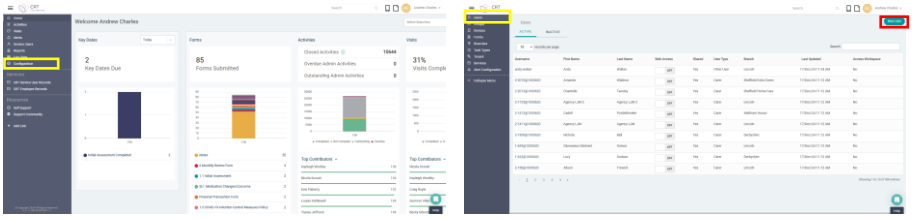

Perfect Care Care services

Instructions

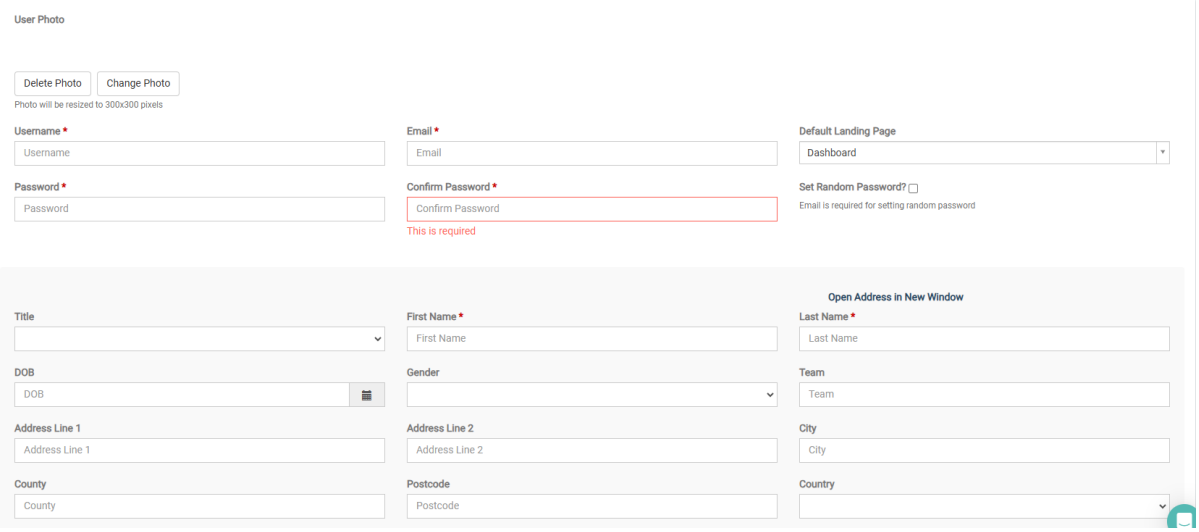

(1) Go into Access Care Planning, and click the 3 bars to access the menu and enter the configuration section.

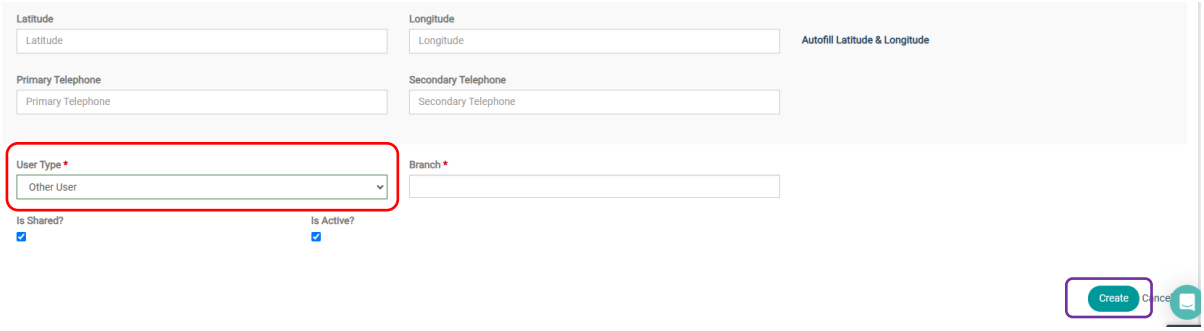

(2) Select Configuration, and then Select Users, and then click new user.

(3) Create a username for the person, the best way of doing this is use firstname.lastname, and then create a password. It will need to be in the following format Password12$ [a capital, numbers and symbol] the system will not let you create a password that does not meet the criteria. All the fields with a * need to be populated. For good practice, complete all the fields in the form. You will need to add an email.

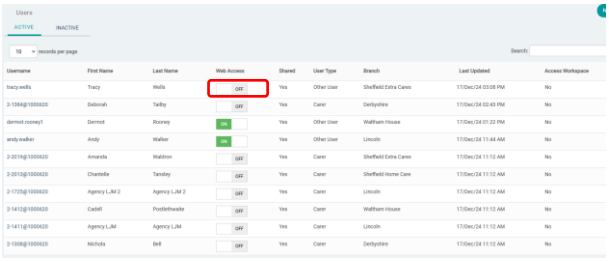

(4) Make sure that the User type is set to Other, and the branch is set to the branch where the person is registered to. [i.e. which branch sets rota's, and allocates staff to the Service User]

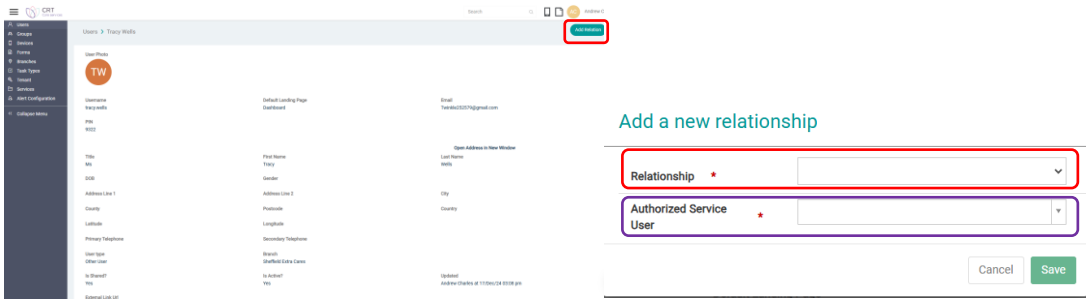

(5) You will need to send the Username, Password and PIN number to the person, so they have the log in details.

(6) If the person wants to access the system through the Web browser and not the application then you need to make sure that you have given them Web Access as shown below. Click and Slide the Web Access to On.

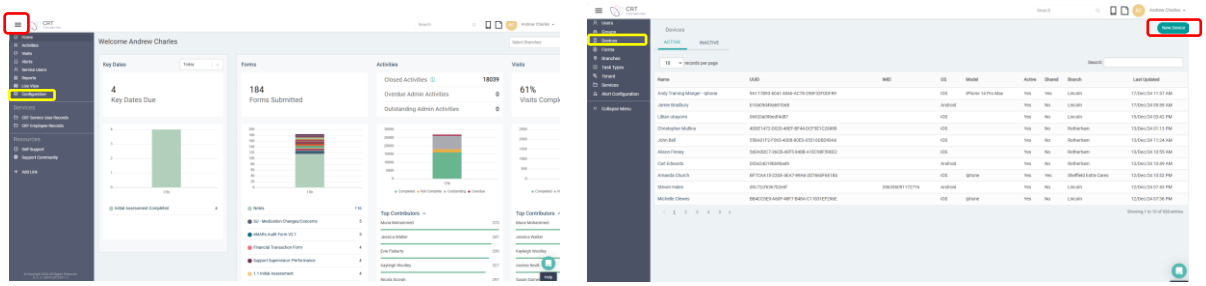

(7) Once you have set the user up you need to link the account to the Service User. Click the persons name and then Select Add Relation as shown below. In the Add a New Relationship box, select the Relationship, and then enter the service users name that we need to link in the Authorized Service User box. Check at the bottom of the screen for Authorised Relationships and make sure the Service Users name is there.

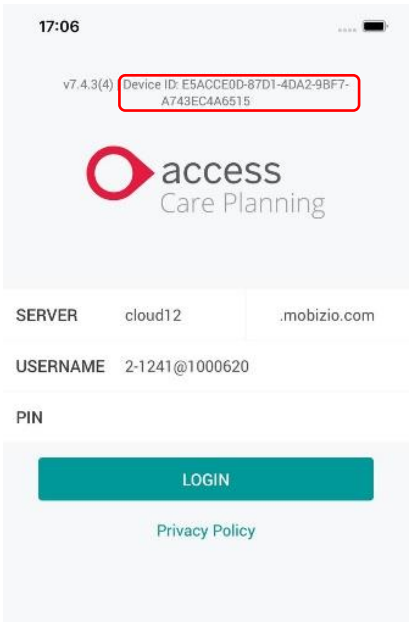

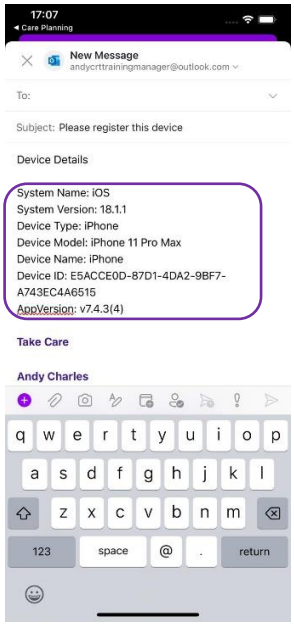

(8) Once you have completed all the fields, then click Create, and this will register the Person on to the system.

(9) Once you have created the Person as a User, you need to register their device on the system. Again we need to go to the 3 bars, and select configuration and then select Devices. As shown below. And then we need to select New Device.

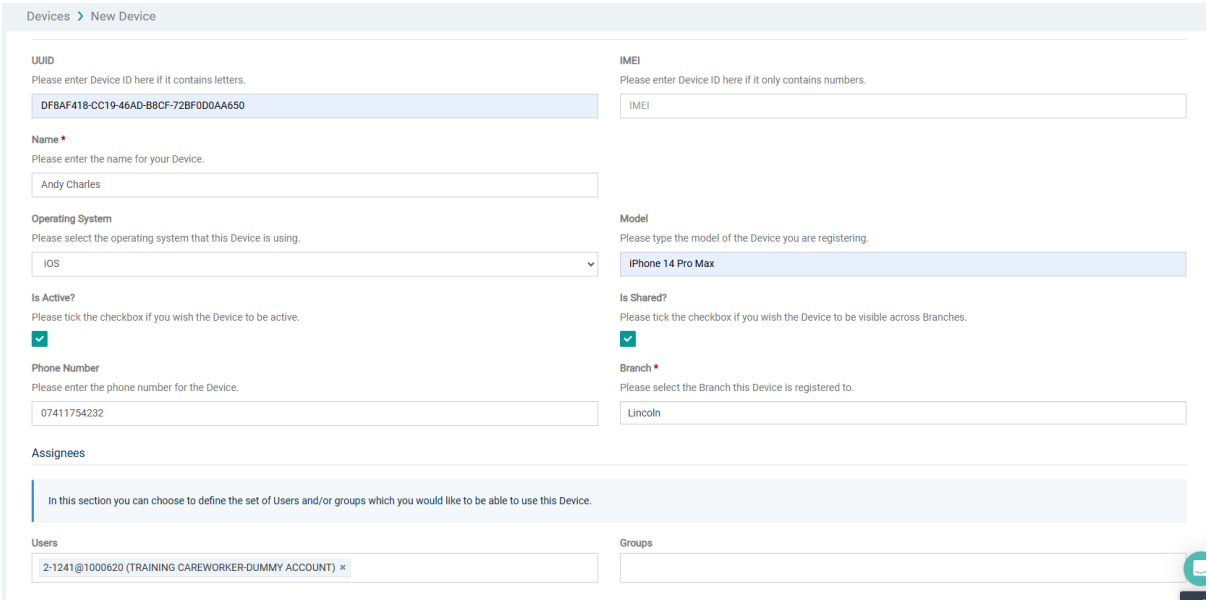

(10) Get the staff member to download the Access Care Planning Application, and you will need to get them to send you the UUID, they can get this number by pressing the UUID at the top of the application screen as shown below. This will open the email application they can send the message as shown below to the office staff to add the UUID to the system. This way you can cut and paste accurately into the app from your email.

(11) Once you have got the UUID from the person, you need to complete the form. Complete all the sections of the form.

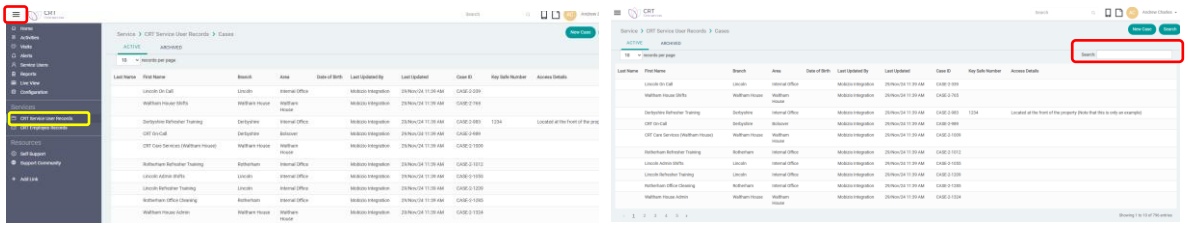

(12) You only need to click the Is Shared? Box if you have someone needing access across branches. i.e. staff member working in two different branches then they will need to have his shared.

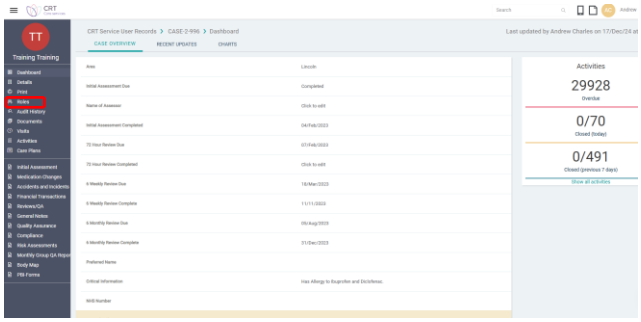

(13) Under assignees, this needs to be allocated to the new user that we have just set up.

(14) Once you have set the New User and setup the device, we now need to make sure that the Service User Record has been allocated to the Next of Kin and correct groups.

(15) Click the 3 bars, and then select CRT Service User Records, or Dale Care Service User Records, or Perfect Care Service User Records. And then search for the Service User we need to link to the New User and Device.

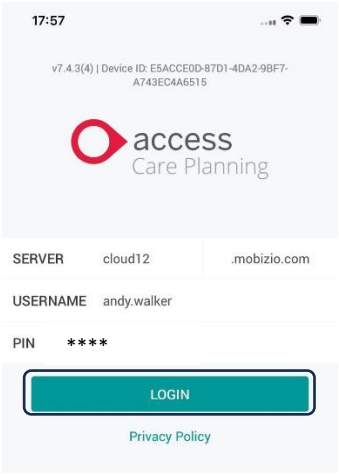

(16) Click on the Service User we need to add, and then select Roles.

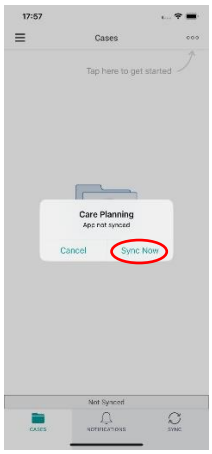

(17) You need to select Edit from the roles screen, and scroll down to NOK, and make sure that the NOK section Group is blank, and in Users section type in the new user that you have just setup.

(18) Once you have completed all the above then the person that you have setup should be able to log in and see the records and visits of the person.

(19) Firstly we will look at the Application. The Person will need to enter the cloud server for the branch, for CRT, Care Watch and Dale Care it is Cloud12, and for Perfect Care it is Cloud2. Then they will need to enter their user name and pin as shown below. Then click Log In.

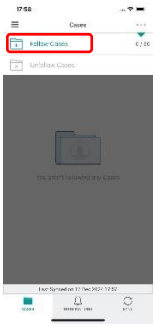

(20) You will then see a message saying Care Planning, app not Synced. Please select Sync Now as shown below.

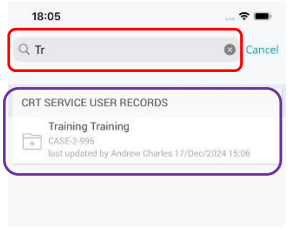

The Arrows will start rotating, when they stop the Sync is complete.

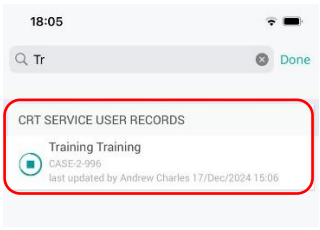

(21)When the Sync is complete, then select the 3 dots as shown below to link to the Service User visit notes.

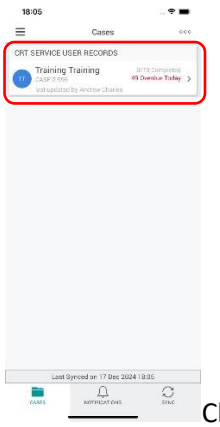

The click Follow Cases

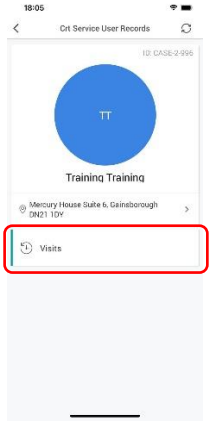

(22) In the Search bar enter the name of the Service User, and click Search and then select the Service Users name as shown below.

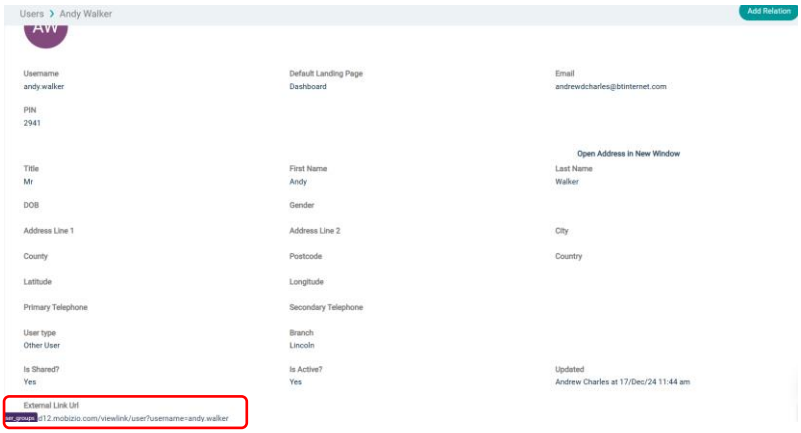

It will then download the Case Records to the App

(23) You will then see this on you opening screen. You can then click in to the record and it will show you the visits. As Shown below.

Click visits to view the notes.

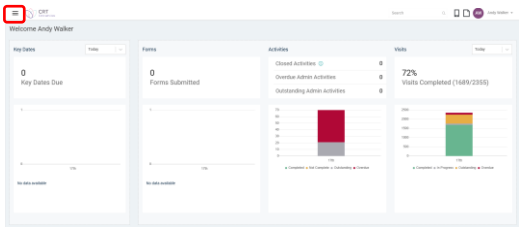

(24) To Access the system through a Webrowser, the New User will need to use the link located at the bottom of their screen. As Shown below.

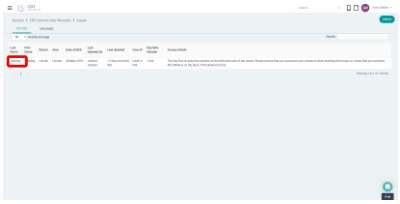

(25) Click the link and then enter your User Name, and Password and click Sign In. If the person shares a computer tell them not to save / remember me password.

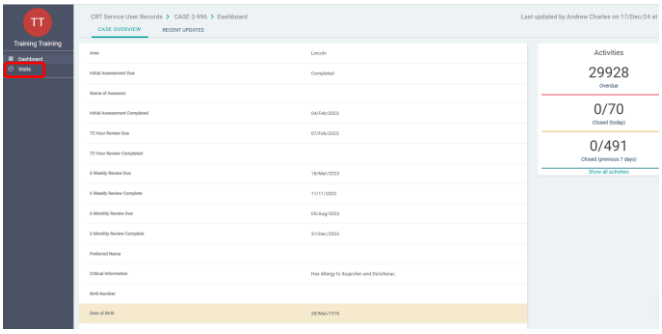

You will then need to click the 3 bars

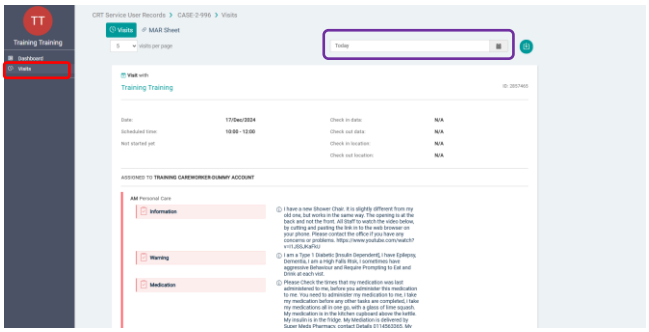

Then Click the Service User Records. And select the Service Users name.

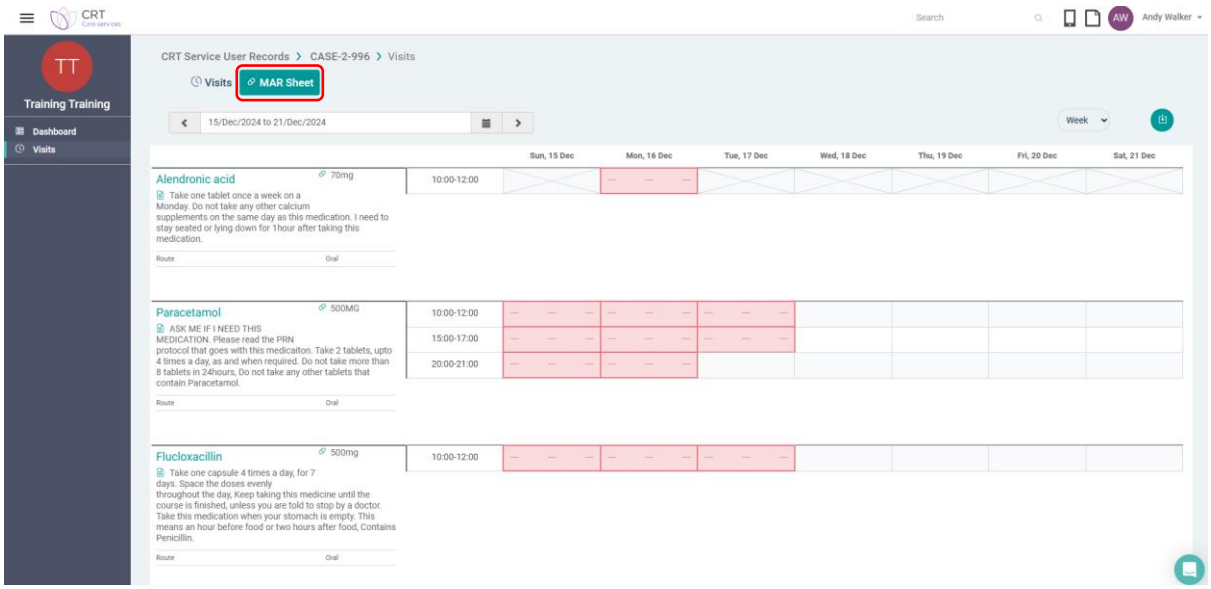

(26) You then will see the Service User Dashboard Screen, and then select Visits.

(27) You will then see the Visits, you can change the date range by selecting the today box and changing the dates there.

(28) You can see the medications that have been administered by clicking the MAR sheet.
